H-162-OS

13/₁₆" X 15/₈" 12 Gauge Channel wt./100 ft. - 130#

Stocked in pre-galvanized, plain & powder coated Supr-Green, in both 10 & 20 ft. lengths. Note: Also available in Stainless Steel 304 & 316 Alloys. Other materials, finishes & lengths are available upon request.

Specifications

GENERAL

H-STRUT channels are manufactured by a series of forming dies, or rolls, which progressively cold work the strip steel into the desired channel configuration. This method produces a cross section of uniform dimensions within a tolerance of plus or minus 0.015", on outside dimensions.

LENGTH INFORMATION

H-STRUT Channels are produced and stocked in 10' and 20' lengths with a tolerance of \pm $\frac{1}{8}$ ". Other lengths are available upon request.

LOADING DATA

- 1. When calculating load at center of span, multiply load from table by 0.5 and deflection by 0.8.
- 2. When calculating beam and column loads for aluminum, multiply by 33%.

MATERIAL

H-STRUT channels are produced from prime structural steel covered by the following specifications. (See technical section for additional information)

- ☐ Pre-Galvanized Steel ASTM A-653
- □ Plain Steel ASTM A-1011-04-SS
- ☐ Aluminum (Type 6063T6) ASTM B-221
- ☐ Stainless Steel (Type 304 & 316) . . ASTM A-240
- Other materials and specifications available on request.

FINISHES

All H-STRUT channels are stocked in pre-galvanized and powder coated Supr-Green. Some sizes are stocked in zinc trivalent chromium, PVC or hot dipped galvanized.

- ☐ Hot Dipped Galvanized. ASTM A-123
- ☐ Zinc Trivalent Chromium. ASTM B-633-85
- ☐ Powder Coated Supr-Green....ASTM B-117
- □ PVC Coating 40 ML Thickness Available Upon Request

Bearing Load may limit load

NR = Not Recommended

Notes

- 1. The beam capacities shown above include the weight of the strut beam. The beam weight must be subtracted from these capacities to arrive at the net beam capacity.
- 2. Allowable beam loads are based on a uniformly loaded, simply supported beam. For capacities of a beam loaded at midspan at a single point, multiply the beam capacity by 50% and deflection by 80%.
- 3. The above chart shows beam capacities for strut without holes. For strut with holes, multiply by the following:

OS by 88%

4. Refer to the latest Haydon Engineering Catalog in our Literature Section for reduction factors for unbraced lengths or call us 1-800-2-HAYDON.
