

### SCOPE

Covers black electric-resistance welded Grade A pipe with nominal wall thickness as shown. Pipe is intended for mechanical and pressure applications and is acceptable for steam, water, gas, or air lines. Pipe is suitable for roll grooving, welding and threading. Produced to the latest revision of ASTM A53A/53M - ASME B36.10M. All products are UL-listed and FM-approved.

### TENSILE REQUIREMENTS

Tensile Strength min.	48000 psi
Yield Strength min.	30000 psi
Elongation in 2"	Refer to A53 Table x 4.1

### BEND TEST

For NPS 2" and smaller a length of pipe shall be capable of being bent cold through 90° around a cylindrical mandrel twelve times the size of the outside diameter without developing cracks or opening the weld.

### FREQUENCY OF TESTS

Tensile tests are required on 1/500 lengths of pipe for each size.

### END FINISH

Plain End	Mfg. Option
Threaded	To ANSI Standard B 1.20.1
Coupling	To ASTM Standard A865

### PRODUCT MARKING

Each length of pipe is continuously stenciled to show the manufacturer, the grade of pipe (ASTM A53), the kind of pipe (E for Electric Resistance Welded, A for Grade A), and length.

Each bundle of STD A53 will have a tag securely attached showing quantity, run #, and dimensions.

### HYDROSTATIC & NONDESTRUCTIVE ELECTRIC TESTING

Hydrostatic inspection test pressures for plain-end pipe are listed in Table X 2.2 of the A53/A53M specification. Test pressures shall be maintained for a minimum of five seconds.

Nondestructive electric testing of the weld seam is performed on all sizes of pipe.

America's first LED UV-curing pipe-coating technology is engineered to meet rigorous demands, delivering unmatched performance and aesthetic appeal.

Protects pipe interiors from MIC and oxygen corrosion, ensuring lasting benefits through additional, routine treatment options.
